

CSA1505 - CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-7

7. Create a simple cloud software application for Students Attendance System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the students, course, present, Absent, course attendance, OD request, grade, attendance percentage, etc.

AIM:

To develop a simple Student Attendance System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application manages student attendance records, tracks attendance percentage, processes OD (On Duty) requests, and assigns attendance grades through a cloud-based platform.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Student Attendance System.

Design a form with the following fields:

- Student Name
- Register Number
- Course
- Total Classes Conducted
- Classes Attended (Present)
- Classes Missed (Absent)
- Course Attendance
- OD (On Duty) Request (Yes/No)
- Attendance Percentage
- Attendance Grade
- Attendance Date

Configure the required fields using text boxes, number fields, date fields, and drop-down lists.

Create workflows to:

- Automatically calculate the Attendance Percentage.
- Display the Attendance Grade based on the attendance percentage (Excellent, Good, Average, Poor).

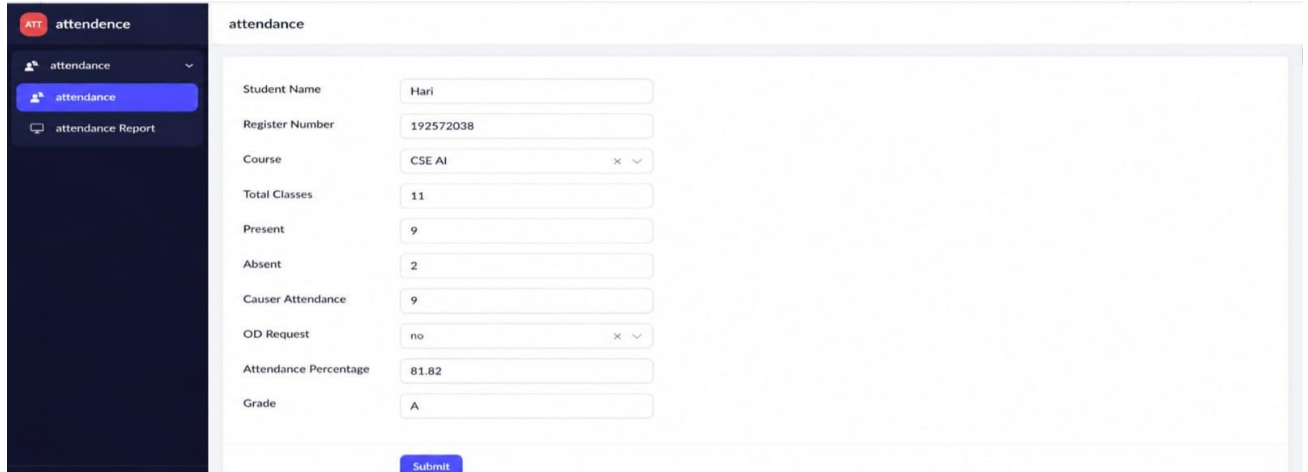

- Automatically set the Attendance Date to the current date.

Save and publish the application.

Enter sample student attendance details and submit the form.

Verify that the attendance percentage, attendance grade, and attendance records are calculated and stored correctly.

INPUT:

attendance

Student Name: Hari

Register Number: 192572038

Course: CSE AI

Total Classes: 11

Present: 9

Absent: 2

Causer Attendance: 9

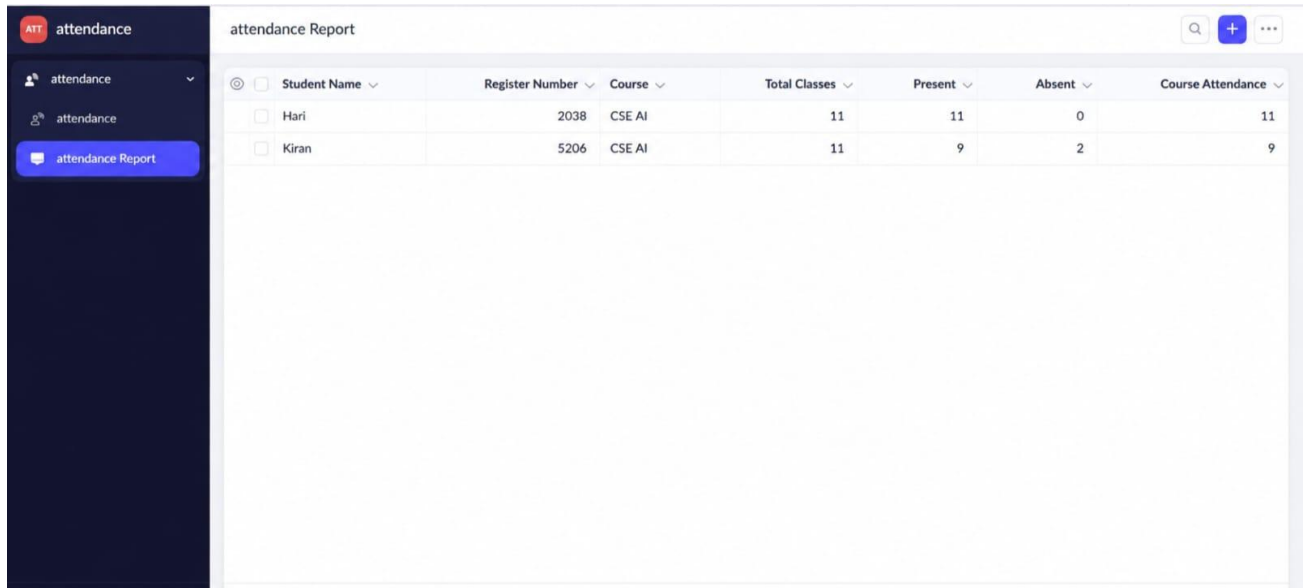

OD Request: no

Attendance Percentage: 81.82

Grade: A

Submit

OUTPUT:

attendance Report

Student Name	Register Number	Course	Total Classes	Present	Absent	Course Attendance
Hari	2038	CSE AI	11	11	0	11
Kiran	5206	CSE AI	11	9	2	9

DESIGN:

The screenshot displays a web application for managing student attendance. On the left, a dark sidebar contains the application logo 'ATY attendance' and a menu with 'attendance' (selected) and 'attendance Report'. The main content area, titled 'attendance', features a form with the following fields: 'Student Name' (text input), 'Register Number' (text input with placeholder '000000'), 'Course' (dropdown menu with '-Select-' and a downward arrow), 'Total Classes' (text input with placeholder '000000'), 'Present' (text input with placeholder '000000'), 'Absent' (text input with placeholder '000000'), 'Course Attendance' (text input with placeholder '000000'), 'OD Request' (dropdown menu with '-Select-' and a downward arrow), 'Attendance Percentage' (text input with placeholder '000000.00'), and 'Grade' (text input). A blue 'Submit' button is located at the bottom right of the form.

RESULT:

A cloud-based Student Attendance System was successfully developed using Zoho Creator. The application stores student attendance details, calculates the attendance percentage, manages OD requests, assigns attendance grades, and maintains attendance records efficiently. This demonstrates the implementation of the Software as a Service (SaaS) model using a cloud platform.
