

CSA1505 - CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-5

5. Create a simple cloud software application for Mark Sheet Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the student, Reg no of the student , Subjects , Marks, Average, percentage, rank, overall performance etc.

AIM:

To develop a simple Mark Sheet Processing System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application manages student mark details, calculates the average, percentage, rank, and overall performance, and stores the results in a cloud-based environment.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Mark Sheet Processing System.

Design a form with the following fields:

- Student Name
- Register Number
- Subject 1
- Subject 2
- Subject 3
- Subject 4
- Subject 5
- Marks for each subject
- Total Marks
- Average
- Percentage
- Rank
- Overall Performance
- Result Date

Configure the required fields using text boxes, number fields, and calculated fields.

Create workflows to:

- Automatically calculate Total Marks.

- Calculate Average and Percentage.
- Display Overall Performance based on the percentage (Distinction, First Class, Second Class, Pass, or Fail).
- Automatically set the Result Date to the current date.

Save and publish the application.

Enter sample student details and marks, then submit the form.

Verify that the total, average, percentage, rank, and overall performance are calculated and stored correctly.

INPUT:

The 'mark' form contains the following data:

Field	Value
Student Name	Hari prakash.N
Register Number	192572038
Subject 1	maths
Mark 1	90
Subject 2	phy
Mark 2	92
Subject 3	chem
Mark 3	89
Subject 4	cs
Mark 4	98
Subject 5	Biology
Mark 5	96

OUTPUT:

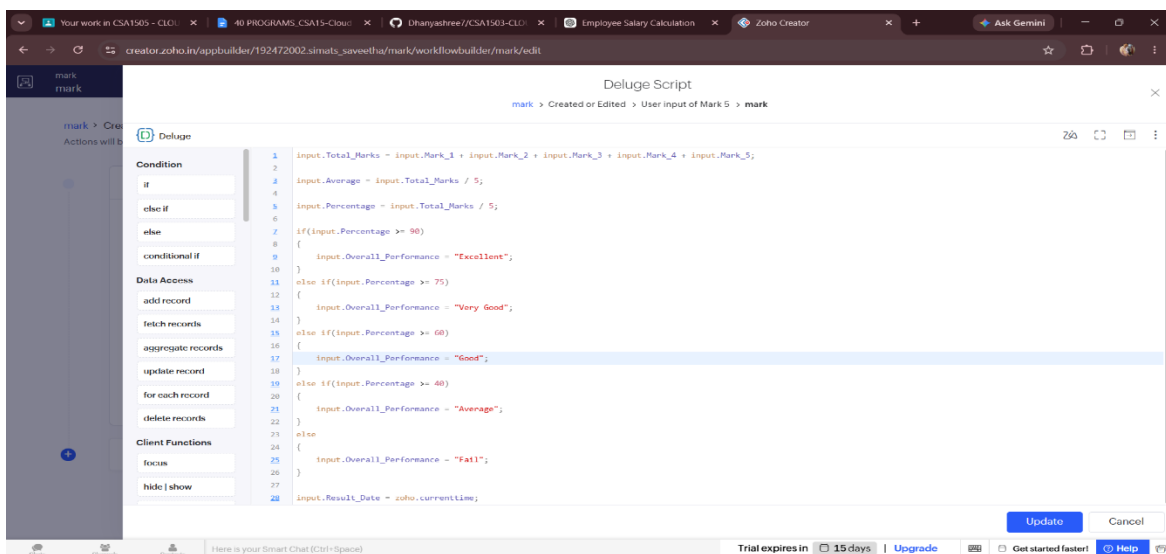

The 'mark Report' table contains the following data:

Student Name	Register Number	Subject 1	Mark 1	Subject 2	Mark 2	Subject 3
Hari prakash.N	192572038	maths	90	phy	92	chem
naveen	192525206	phy	75	chem	88	maths

DESIGN:

The screenshot displays the 'mark' application interface. On the left is a dark sidebar with a 'mark' logo and navigation options: 'mark', 'mark Report', and 'mark'. The main area is a light gray form titled 'mark'. It contains the following fields: 'Student Name' (text input), 'Register Number' (text input), 'Subject 1' (text input), 'Mark 1' (text input with a placeholder '#####'), 'Subject 2' (text input), 'Mark 2' (text input with a placeholder '#####'), 'Subject 3' (text input), 'Mark 3' (text input with a placeholder '#####'), 'Subject 4' (text input), 'Mark 4' (text input with a placeholder '#####'), 'Subject 5' (text input), and 'Mark 5' (text input with a placeholder '#####').

WORKFLOW:

RESULT:

A cloud-based Mark Sheet Processing System was successfully developed using Zoho Creator. The application stores student information, automatically calculates the total marks, average, percentage, rank, and overall performance, and records the result date. This demonstrates the implementation of the Software as a Service (SaaS) model using a cloud platform.
