

CSA1505 - CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-6

6. Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

AIM:

To develop a simple Employee Salary Management System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application calculates the employee's gross salary and net salary based on salary components and deductions.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Employee Salary Management System.

Design a form with the following fields:

- Employee Name
- Employee ID
- Basic Salary
- Dearness Allowance (DA)
- House Rent Allowance (HRA)
- City Compensatory Allowance (CCA)
- Performance Compensation (PC)
- Tax
- Gross Salary
- Net Salary
- Last Update

Create workflows to:

- Calculate Gross Salary = Basic Salary + DA + HRA + CCA + PC.
- Calculate Net Salary = Gross Salary – Tax.
- Automatically update Last Update with the current date and time.

Save and publish the application.

Enter sample employee salary details.

Verify that the salary calculations and automatic updates are performed correctly.

INPUT:

EMP

employee

emp salary

emp salary

emp salary Report

	Hari	48	₹ 40,000.00	₹ 4,000.00	₹ 6,000.00	₹ 1,500.00	₹ 2,500.00
	kiran	46	₹ 30,000.00	₹ 3,000.00	₹ 5,000.00	₹ 1,000.00	₹ 2,000.00

DESIGN:

The image shows a UI design for an 'employee' application. On the left is a dark sidebar with a menu containing 'emp salary' (selected) and 'emp salary Report'. The main area is titled 'emp salary' and contains a form with the following fields: 'Name' (text input), 'emp id' (text input with mask '#####'), 'salary' (text input with mask '00,000.00'), 'DA' (text input with mask '00,000.00'), 'HRA' (text input with mask '00,000.00'), 'CCA' (text input with mask '00,000.00'), 'PC' (text input with mask '00,000.00'), 'Tax' (text input with mask '00,000.00'), 'Gross Salary' (text input with mask '00,000.00'), 'Net Salary' (text input with mask '00,000.00'), and 'Last Update' (text input with mask 'dd-MM-yyyy HH:mm:ss').

WORKFLOW:

The image shows the Zoho Creator workflow builder interface. The workflow is named 'Employee Salary Calculation'. The 'Deluge Script' step is active, showing a script that calculates the gross salary: $\text{BasicSalary} + \text{DA} + \text{HRA} + \text{CCA} + \text{PC}$. The left sidebar shows the 'Deluge' section with various actions like 'add record', 'fetch records', 'aggregate records', 'update record', 'for each record', and 'delete records'.

RESULT:

A cloud-based Employee Salary Management System was successfully developed using Zoho Creator. The application stores employee salary details, automatically calculates gross salary and net salary, and updates the last modified date. This demonstrates the Software as a Service (SaaS) model using a cloud platform.
