

CSA1505 - CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-8

7. Create a simple cloud web application for student counselling system using any Cloud Service Provider to demonstrate SaaS with the fields of student name, age, address, phone, subjects studied, Year of passing, percentage of marks, domain interest, etc.

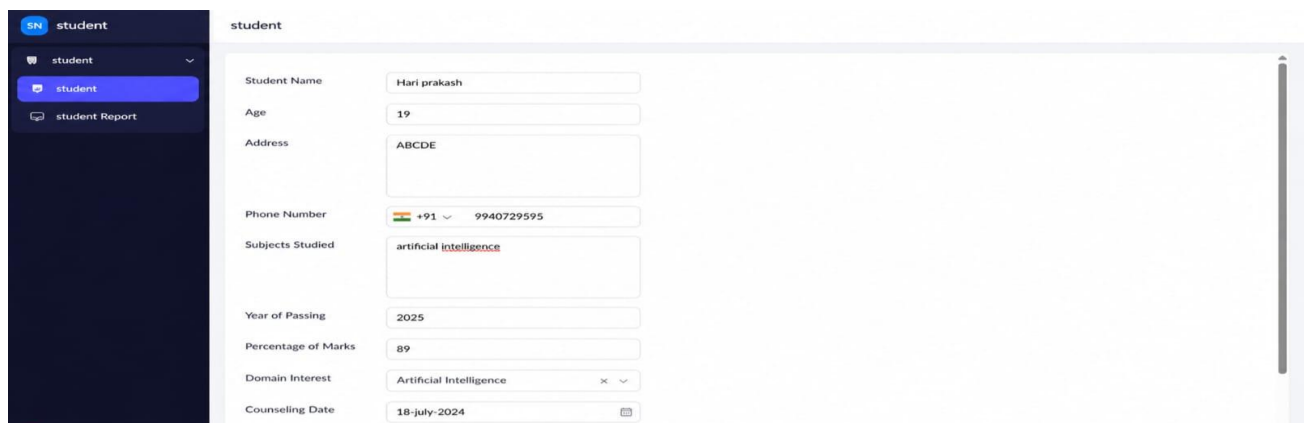

AIM:

To develop a simple Student Counselling System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application stores student personal and academic details, identifies their domain of interest, and automatically updates the counselling status based on their academic performance.

PROCEDURE:

- Log in to Zoho Creator.
- Create a new application named Student Counselling System.
- Design a form with fields such as student name, age, address, phone number, subjects studied, year of passing, percentage of marks, domain interest, counselling date, and counselling status.
- Configure the required field types and drop-down values.
- Create a workflow to automatically record the counselling date and assign the counselling status based on the student's percentage.
- Save and publish the application.
- Enter sample student details and verify that the application stores the information and updates the counselling status automatically.

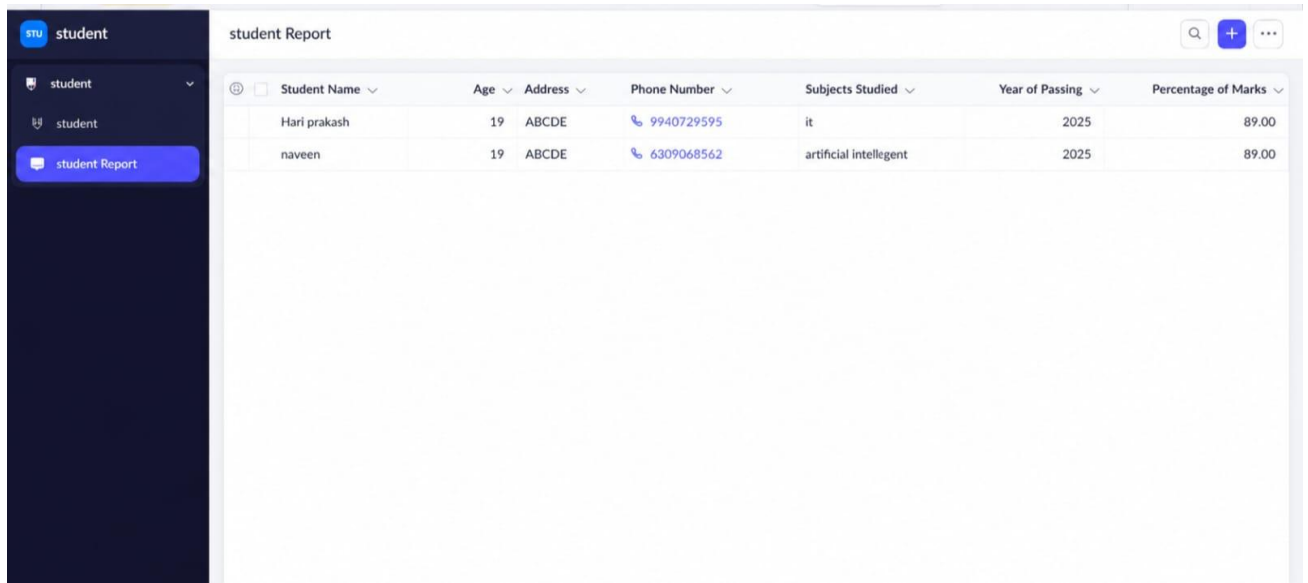

INPUT:

The screenshot shows a Zoho Creator application interface. On the left is a dark sidebar with a menu containing 'student' (selected), 'student Report', and a 'student' icon. The main area displays a form titled 'student' with the following fields:

Student Name	Hari prakash
Age	19
Address	ABCDE
Phone Number	+91 9940729595
Subjects Studied	artificial intelligence
Year of Passing	2025
Percentage of Marks	89
Domain Interest	Artificial Intelligence
Counseling Date	18-july-2024

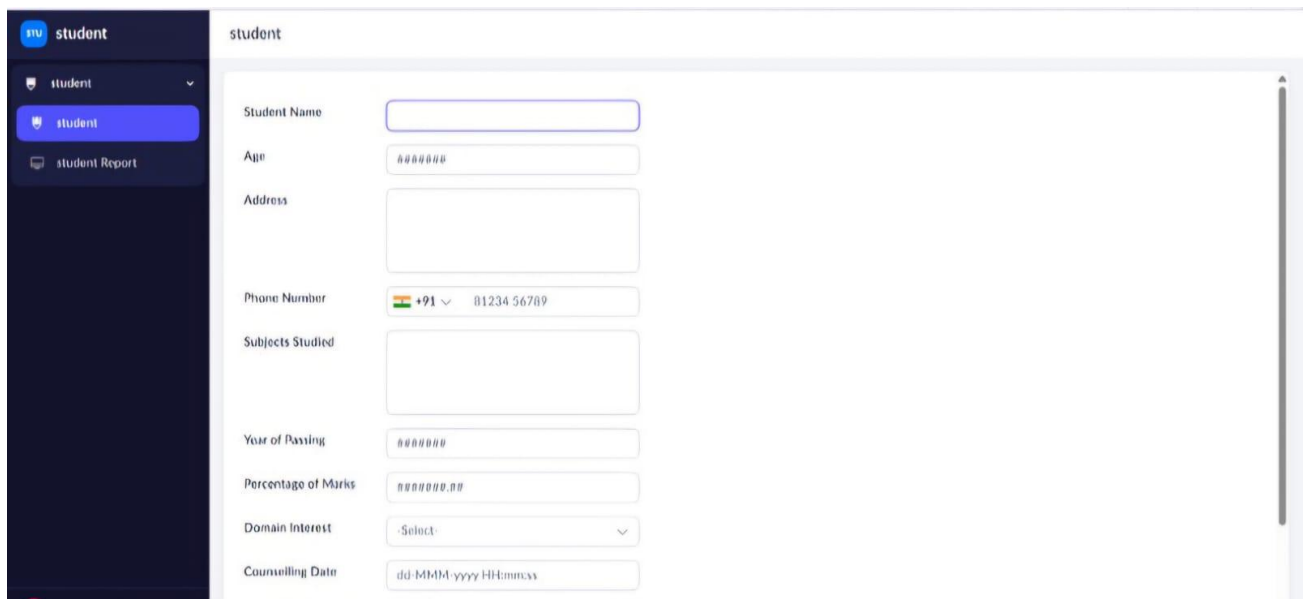

OUTPUT:

The screenshot displays a web application interface for a 'student Report'. On the left is a dark sidebar with a 'student' header and a menu containing 'student' and 'student Report' (highlighted). The main area is titled 'student Report' and contains a table with the following columns: Student Name, Age, Address, Phone Number, Subjects Studied, Year of Passing, and Percentage of Marks. The table lists two students: Hari prakash and naveen, both aged 19, with addresses 'ABCDE' and phone numbers '9940729595' and '6309068562' respectively. Both students studied 'it' and 'artificial intellegent' (sic) and passed in 2025 with 89.00% marks.

Student Name	Age	Address	Phone Number	Subjects Studied	Year of Passing	Percentage of Marks
Hari prakash	19	ABCDE	9940729595	it	2025	89.00
naveen	19	ABCDE	6309068562	artificial intellegent	2025	89.00

DESIGN:

The screenshot shows the 'student' form interface. The sidebar is identical to the previous screenshot, with 'student' highlighted in the menu. The main area is titled 'student' and contains a form with the following fields: Student Name (text input), Age (text input with placeholder '#####'), Address (text input), Phone Number (text input with a dropdown for country code '+91' and placeholder '81234 56789'), Subjects Studied (text input), Year of Passing (text input with placeholder '#####'), Percentage of Marks (text input with placeholder '#####.##'), Domain Interest (dropdown menu with 'Select' option), and Counselling Date (text input with placeholder 'dd-MMM-yyyy HH:mm:ss').

RESULT:

A cloud-based Student Counselling System was successfully developed using Zoho Creator. The application stores student personal and academic details, records their domain interests, automatically updates the counselling date and counselling status, and demonstrates the Software as a Service (SaaS) model using a cloud platform.
